FIREFLY

TEST DRIVES™

WHAT IS A TEST DRIVE?

+ A one-day session to explore a product's technical feature sets

+ A close, consultative look at the architecture

+ An opportunity to discover how the product fits your requirements and environment – with third-party industry experts

+ A chance to experience the product in a hands-on environment

HOW CAN YOU BEST BENEFIT FROM A TEST DRIVE?

+ Get engaged – an interactive session is best for everyone

+ Ask questions – leverage the technical expertise of the presenter & on-site Dell Technologies Hosts/SMEs

+ Collaborate – exchange data center experiences with your peers in the industry

+ Participate in labs- observe the solution's features and capabilities first hand

A TEST DRIVE IS *NOT*:

+ A day-to-day operations, administration, or troubleshooting training – Test Drives focus on architecture

+ A 1:1 meeting – you will be participating with a group of your peers

+ A discussion comparing Dell Technologies products to competitors' products

*If your organization is interested in additional support that surpasses the Test Drive's deliverables please leverage your Dell EMC team to see what specific training is available.
