

Understanding Cisco Collaboration Foundations

DURATION: 5 DAYS

COURSE CODE: CLFNDU

FORMAT: LECTURE/LAB

COURSE DESCRIPTION

The Understanding Cisco Collaboration Foundations (CLFNDU) 1.0 course gives you the skills and knowledge needed to administer and support a simple, single-site Cisco® Unified Communications Manager (CM) solution with Session Initiation Protocol (SIP) gateway. The course covers initial parameters, management of devices including phones and video endpoints, management of users, and management of media resources, as well as Cisco Unified Communications solutions maintenance and troubleshooting tools. In addition, you will learn the basics of SIP dial plans including connectivity to Public Switched Telephone Network (PSTN) services, and how to use class-of-service capabilities.

This course provides the fundamental knowledge needed to take CCNP® Collaboration certification courses. It also serves as entry-level training for newcomers to Cisco on-premise collaboration technologies.

WHO SHOULD ATTEND

Students preparing to take the CCNP Collaboration certification

Network administrators

Network engineers

Systems engineers

PREREQUISITES

Internet web browser usability knowledge and general computer usage

Knowledge of Cisco Internetwork Operating System (Cisco IOS®) command line

HOW YOU'LL BENEFIT

Administer a single-site Cisco Unified Communications Manager, handling daily tasks such as add, moves, changes and deletions of phones, video endpoints, and users

Configure Jabber devices and implement common endpoint features including call park, shared lines, pickup groups, and phone button templates

Introduce you to the SIP protocol, how calls are connected, and how media codes are determined

Introduce you to the capabilities and basic configuration of an SIP gateway for PSTN access

Introduce you to the dial plan elements used to route calls, and the class-of-service capabilities to control who can route calls where

Administer Cisco Unity Connection handling daily tasks such as add, moves, and changes and deletions of voicemail boxes and users

Administer maintenance tasks and use the troubleshooting tools available on Cisco Unified Communications Manager and Cisco Real-time Monitoring Tool

LEARNING OBJECTIVES

Define collaboration and describe the main purpose of key devices in a Cisco collaboration on-premise, hybrid, and cloud deployment model

Configure and modify required parameters in Cisco Unified Communications Manager (CM) including service activation, enterprise parameters, CM groups, time settings, and device pool

Deploy and troubleshoot IP phones via auto registration and manual configuration within Cisco Unified CM

Describe the call setup and teardown process for a SIP device including codec negotiation using Session Description Protocol (SDP) and media channel setup

Manage Cisco Unified CM user accounts (local and via Lightweight Directory Access Protocol [LDAP]) including the role/group, service profile, UC service, and credential policy

Configure dial plan elements within a single site Cisco Unified CM deployment including Route Groups, Local Route Group, Route Lists, Route Patterns, Translation Patterns, Transforms, SIP Trunks, and SIP Route Patterns

Configure Class of Control on Cisco Unified CM to control which devices and lines have access to services

Configure Cisco Unified CM for Cisco Jabber and implement common endpoint features including call park, softkeys, shared lines, and pickup groups

Deploy a simple SIP dial plan on a Cisco Integrated Service Routers (ISR) gateway to enable access to the PSTN network

Manage Cisco UCM access to media resources available within Cisco UCM and Cisco ISR gateways

Describe tools for reporting and maintenance including Unified Reports, Cisco Real-Time Monitoring Tool (RTMT), Disaster Recovery System (DRS), and Call Detail Records (CDRs) within Cisco Unified CM

Describe additional considerations for deploying video endpoints in Cisco Unified CM

Describe the integration of Cisco Unity® with Cisco Unified CM and the default call handler

COURSE OUTLINE

1. Exploring the Path to Collaboration
2. Introducing Cisco Unified Communications Manager and Initial Parameters
3. Exploring Endpoints and the Registration Process
4. Exploring Codecs and Call Signaling
5. Managing Users in Cisco Unified Communication Manager
6. Describing a Basic Dial Plan
7. Describing Class of Service
8. Enabling Endpoints and Features
9. Describing the Cisco ISR as a Voice Gateway
10. Exploring Cisco Unified Communication Manager Media Resources
11. Reporting and Maintenance
12. Exploring Additional Requirements for Video Endpoints
13. Describing Cisco Unity Connection

DISCOVERY LABS

- 1: Configure Default Cisco Unified CM System and Enterprise Parameters
- 2: Configure the Cisco Unified CM Core System Settings
- 3: Configure an Access Switch for an Endpoint
- 4: Deploy an IP Phone Through Auto and Manual Registration
- 5: Administer Endpoints in Cisco Unified Communications Manager
- 6: Create a Local User Account and Configure LDAP
- 7: Implement Users
- 8: Create a Basic Dial Plan
- 9: Explore Partitions and Call Search Spaces
- 10: Describe Private Line Automatic Ringdown (PLAR)
- 11: Deploy an On-Premise Cisco Jabber® Client for Windows
- 12: Implement Common Endpoint Features
- 13: Configure Common Endpoint Features
- 14: Configure Voice over Internet Protocol (VoIP) Dial Peers
- 15: Configure Integrated Service Digital Network (ISDN) Circuits and Plain Old Telephone Service (POTS) Dial Peers
- 16: Control Access to Media Resources
- 17: Use Reporting and Maintenance Tools
- 18: Explore Endpoint Troubleshooting Tools
- 19: Examine the Integration between Unity Connection and Cisco Unified CM
- 20: Manage Unity Connection Users
